

## **The Town of Petersfield: Utilities**

Like most towns in this country we are well served by utility companies, providing water, electricity, gas and sewage disposal and waste disposal. It is easy to take these utilities for granted; yet it only takes a few hours without one of them to realize how much we rely on them!

### **Pray for:**

- ... those who plan and maintain the national infrastructure that ensures the supply of water, electricity, gas and sewage disposal.
- ... those who monitor and maintain these services locally.
- ... those whose work involves repairing faults in the supply of these services.
- ... those who regularly and reliably come to remove our rubbish.
- ... the systems involved in collecting and recycling those materials than can be recycled.
- ... the bottle banks, metal collection points, paper and card collection points that are to be found throughout the town.
- ... the local "dump" to which we can take our rubbish, for those working there and for the materials that can be recycled.
- ... the thoughtful use of these utilities.
- ... those throughout the world who do not have reliable water, electricity, gas and sewage disposal – and organisations such as ActionAid, WaterAid, Oxfam and TreeAid would have great success in helping to provide these utilities.
- ... a recognition that we are enormously blessed by having such ready access to our utilities and that we have an awareness that so many do not have them – and that we might do something about this.
